3. Promote network connectivity and accessibility.
4. Support the integration of bicycle facilities into broader transportation systems.

The scope covers a wide range of bicycle infrastructure types, including bike lanes, bike boulevards, shared-use paths, and bicycle parking facilities, providing detailed design criteria for each. Types of Bicycle Facilities Recommended by the AASHTO Guide The guide categorizes bicycle facilities based on their intended function, location, and user needs. Understanding these types is essential for planning an effective bicycle network. On-Road Bicycle Facilities Bike Lanes Bike lanes are designated lanes for cyclists, typically marked by pavement markings and signage. They are usually positioned adjacent to vehicle lanes to provide a dedicated space for biking. Shared Lane Markings (Sharrow) These markings indicate a shared space for bicycles and vehicles within a lane too narrow for dedicated bike lanes, encouraging cyclist visibility and awareness. Wide Shoulders Wider shoulders can serve as bike lanes where space permits, offering an alternative to painted lanes, especially on higher-speed roads. Off-Road Bicycle Facilities Shared-Use Paths Separated from motor vehicle traffic, these paths are suitable for all ages and skill levels, often running parallel to roads or through parks. Bicycle Trails Designed primarily for recreational use, these trails may be more natural or rugged but still adhere to safety and accessibility standards. Special Facilities Bicycle Parking Secure, accessible parking facilities are vital for encouraging cycling by providing convenient storage options. Bicycle Signalization Traffic signals specifically designed for bicycles improve safety at intersections, especially in complex urban areas. Design Principles and Standards from the AASHTO Guide Designing effective bicycle facilities requires adherence to specific standards and principles outlined in the guide. These ensure safety, comfort, and connectivity. Safety Considerations Clear Visibility and Signage Ensuring that cyclists and motorists can see each other and are aware of designated bicycle facilities reduces accidents. Adequate Width and Separation Designing bike lanes wide enough to accommodate various cyclist types, with proper buffers from vehicle lanes, enhances safety. Connectivity and Network Design Continuity Bicycle facilities should connect seamlessly across different road types and areas to promote consistent and practical routes. Directness Routes should minimize detours and avoid unnecessary complexities, making cycling a convenient mode of transportation. Accessibility and Inclusivity Universal Design Facilities must accommodate users of all ages and abilities, including children, seniors, and persons with disabilities. Smooth Surfaces and Proper Crossings Ensuring surfaces are free of hazards and crossings are safe and accessible encourages wider usage. Planning and Implementing Bicycle Facilities Using the AASHTO Guide Effective planning and implementation are essential for creating a successful bicycle network aligned with AASHTO standards. 2. Comfort and Convenience: Creating facilities that encourage ridership by making biking an attractive alternative.
3. Connectivity: Ensuring seamless links within the broader transportation network.
4. Accessibility: Accommodating diverse user groups, including those with limited mobility.
5. Context Sensitivity: Tailoring facility types and designs to local conditions and land use patterns.

Types of Bicycle Facilities Recommended by AASHTO

AASHTO categorizes bicycle facilities into several types, each suited for different contexts and user needs:

1. Shared Lane Markings (Sharrow)

1. Indicate a lane shared by motor vehicles and bicycles.
2. Used in roadways where dedicated bike lanes are not feasible.
3. Promote cyclist visibility and alert drivers to bicycle presence.

1. Bicycle Lanes

1. Designated lanes on streets, typically marked with painted lines and bicycle symbols.
2. Usually one-way but can be two-way on certain streets.
3. Can be buffered with parking or physical barriers for added safety.

1. Buffered Bicycle Lanes

1. Bicycle lanes separated from vehicle lanes by a buffer zone (e.g., painted strip, parked cars).
2. Enhance comfort and safety, especially on busy streets.

1. Separated or Protected Bicycle Facilities

1. Fully separated from vehicle traffic by physical barriers such as curbs, buffers, planters, or parked vehicles.
2. Suitable for high-volume or high-speed roads.

1. Shared Use Paths and Trails

1. Off-road facilities accommodating bicycles, pedestrians, and other non-motorized users.
2. Run parallel to roads or along natural corridors like rivers or parks.
3. Provide continuous, safe routes away from vehicle traffic.

1. Bicycle Boulevards (Neighborhood Greenways)

1. Low-speed, low-volume streets optimized for bicycle travel.
2. Prioritize bicycle movement with traffic calming measures.
3. Often incorporate signage, pavement markings, and traffic management to favor cyclists.

Design Considerations and Best Practices

Creating effective bicycle facilities involves attention to multiple factors, from width and surface quality to signage and intersection design.

Bicycle Lane Widths and Dimensions

1. Standard Widths: AASHTO recommends a minimum of 5 feet for one-way lanes and 4 feet for shared lanes.
2. Buffer Zones: A 1-2 foot buffer between bike lanes and moving traffic enhances safety.
3. Physical Barriers: Use of parked cars, planters, or curbs to provide additional separation where needed.

Intersection and Conflict Zone Design

1. Bike Boxes: Designated areas at intersections that give cyclists priority and increase visibility.
2. Advance Stop Lines: Allow cyclists to position ahead of motor vehicles at traffic signals.
3. Signal Timing: Adjust timing to accommodate bicycle movements, especially for turning.

Surface Quality and Maintenance

1. Ensuring smooth, durable surfaces free of debris, potholes, and ice is vital.
2. Regular maintenance reduces hazards and encourages consistent use.

Signage and Markings

1. Use clear pavement markings, directional arrows, and symbols.
2. Install signage indicating bike routes, crossing points, and warnings for drivers.
