Key Configuration Areas in SAP Treasury and Risk Management

Configuring SAP TRM involves multiple interconnected modules and settings. The primary areas include master data setup, organizational structures, transaction types, risk management parameters, and reporting configurations.

1. Master Data Configuration

Master data forms the backbone of SAP TRM, underpinning all transactional and analytical activities.

- a. **Currency and Exchange Rate Settings** - Establish the company's base currency and foreign currencies. - Configure exchange rate types (e.g., spot, forward, historical). - Define exchange rate sources—SAP supports integration with external rate feeds or manual entries. - Set up exchange rate types' validity periods to facilitate accurate conversions.
- b. **Counterparty and Bank Data** - Define counterparties, including customers, vendors, and financial institutions. - Assign relevant bank accounts, account types, and payment methods. - Set up credit limits and risk profiles for counterparties.
- c. **Financial Instruments** - Configure instrument types such as derivatives, loans, and investments. - Define valuation methods and relevant parameters for each instrument.
- d. **Risk and Hedge Data** - Establish risk categories (market risk, credit risk, liquidity risk). - Set up hedge relationships, including hedge types and effectiveness measurement methods.

2. Organizational Structure Configuration

The organizational setup in SAP TRM determines how data flows and how processes are managed.

- **Legal Entities:** Define entities within the system to reflect the company's legal structure.
- **Company Codes:** Assign each legal entity a unique company code for accounting and reporting.
- **Treasury Organization Units:** Set up treasury teams, dealing centers, and risk management units.
- **Business Units & Cost Centers:** Map treasury activities to specific business units for granular reporting. Proper organization configuration ensures clarity in transaction processing and facilitates compliance with internal controls.

3. Transaction and Process Configuration

SAP TRM's transactional setup influences how treasury activities are recorded and processed.

- a. **Transaction Types** - Define various transaction types, such as cash transactions, FX deals, and derivatives. - Assign default parameters like posting accounts, valuation methods, and counterparties.
- b. **Deal Management** - Configure deal entry screens, approval workflows, and validation rules. - Set up deal lifecycle statuses, from initiation to settlement.
- c. **Payment and Settlement Settings** - Link bank accounts, payment methods, and payment blocks. - Automate payment processes through

integration with SAP Bank Communication Management. d. Hedging and Compliance - Establish hedge accounting rules aligned with accounting standards (e.g., IFRS 9, US GAAP). - Configure hedge effectiveness measurement methods and periodic reassessment schedules.

4. Risk Management and Measurement Setup

Effective risk management relies on precise configuration of risk parameters and measurement tools. - Market Risk Parameters - Set risk limits (e.g., VaR, sensitivity limits). - Define risk factors such as interest rates, foreign exchange rates, and commodity prices. - Configure valuation models for derivatives and other instruments. - Credit Risk Settings - Establish credit ratings and scoring models. - Assign exposure limits per counterparty or group. - Integrate external credit risk data sources. - Liquidity Risk Management - Configure liquidity forecasts based on cash flow data. - Set thresholds for liquidity buffers and contingency funding plans. Note: These configurations enable automated risk calculations, limit monitoring, and scenario analysis, empowering treasury teams to make data-driven decisions.
