Infection Control and Airflow Strategies

A core focus of the manual is ensuring that airflow patterns prevent the spread of infectious agents. Key principles include:

- Pressure Differentials: Using positive and negative pressure rooms to contain or exclude airborne contaminants.
- Air Change Rates: Achieving adequate air exchanges per hour (ACH), often exceeding typical commercial standards—ranging from 6 to 12 ACH in general areas and up to 20 ACH or more in isolation or operating rooms.
- Airflow Patterns: Implementing laminar or turbulent airflow tailored to specific zones to minimize cross-contamination.
- Directional Airflow: Ensuring clean air flows from clean zones toward contaminated areas.

Filtration and Air Quality Management

Effective filtration is vital for removing airborne pathogens and particulates:

- Pre-Filters: Capture larger particles, extending the life of finer filters.
- HEPA Filters: Used in critical zones such as operating rooms, isolation rooms, and cleanrooms to remove at least 99.97% of particles ≥ 0.3 microns.
- UV Germicidal Irradiation: Integrated with filtration systems to neutralize microbes on airflow paths.
- Air Purification Technologies: Incorporating activated carbon filters for chemical pollutants.

Thermal Comfort and Humidity Control

Maintaining a stable indoor environment contributes to patient comfort and staff efficiency:
