Understanding Cremation in Michigan City
What Is Cremation?
Cremation is the process of reducing a deceased body to its basic organic and inorganic components through intense heat and flame, resulting in cremated remains commonly called "ashes." The process typically involves placing the body in a cremation chamber, where temperatures reach between 1400 to 1800 degrees

Fahrenheit, for approximately 2-3 hours. Once the process is complete, the remains are carefully collected, processed to remove any metal or foreign objects, and placed in an urn or other container for final disposition.

Why Choose Cremation? Many families opt for cremation due to several compelling reasons: - **Cost-effectiveness:** Generally, cremation is less expensive than traditional burial services. - **Flexibility:** Cremation allows for a variety of memorial service options and timing. - **Environmental considerations:** Cremation reduces land use and avoids the chemicals used in embalming. - **Personal preferences:** Some individuals prefer cremation as a reflection of their values or lifestyle.
