What is a Time Series?

A time series is a sequence of data points collected or recorded at successive points in time, often at uniform intervals. Time series data is prevalent across numerous disciplines, including finance (stock prices), economics (GDP, unemployment rates), environmental science (temperature readings), and engineering (sensor data).

Characteristics of Time Series Data

1. **Trend:** The long-term progression or movement in the data over time.
2. **Seasonality:** Regular, periodic fluctuations that occur at specific intervals (e.g., monthly, quarterly).
3. **Cyclical:** Fluctuations that are not of fixed period, often associated with economic or business cycles.
4. **Irregularity:** Random or residual variations not explained by the other components.

Understanding these components helps in modeling and forecasting future data points effectively.

Fundamentals of Time Series Analysis

Time series analysis involves methods for analyzing the data to extract meaningful statistics and identify underlying patterns. It typically includes decomposition, modeling, and forecasting.

Key Objectives

1. Identify and understand the components of the time series (trend, seasonality, cyclical,

- irregularity).
2. Model the time series data using appropriate statistical models.
 3. Forecast future values based on the models developed.
 4. Assess the accuracy and reliability of the forecasts.

Common Techniques

1. Time domain methods — moving averages, exponential smoothing.
2. Frequency domain methods — spectral analysis.
3. Model-based approaches — AR, MA, ARMA, ARIMA models.
4. Machine learning methods — neural networks, support vector machines (more advanced).
